Welcome

Shaws for Sheds was set up in the year 2000 and is a family run business.

We pride ourselves on quality and care on every product made and have a wide variety of buildings listed in this brochure to suit all needs, whether it's for storing or general everyday use.

However, if you don't find what you are looking for, we can also look to manufacture a building to a customer's own requirements.

All our products are manufactured using quality material and all staff are fully qualified in the making of garden buildings.

All our buildings are pre-treated in a water based solution; however we recommend that you treat them again immediately after erection and yearly thereafter. As wood is a natural product some expansion and shrinkage can occur. This is not something we can prevent.

We also use a polyester felt which is a better product than the standard shed felt; however, this does not guarantee we can prevent any damages due to adverse weather conditions.

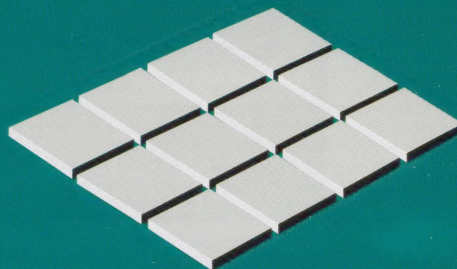

To ensure all products are fulfilling customers needs, we are constantly reviewing our models and prices and reserve the right to change specifications without notice.

Base preparation

When buying any garden building, it is necessary to construct a base for your building to be erected onto. This does not need to be elaborate as long as it is level and firm. This can be done by:

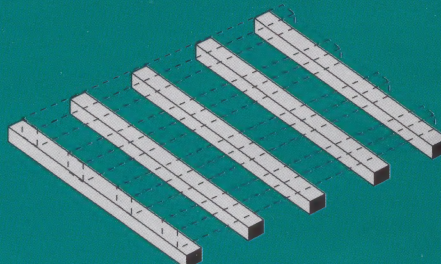

Slabbed Base

If using concrete slabs then sand would need to be laid down first onto firm ground. The slabs would then need to be bedded into the sand making sure that they are laid level.

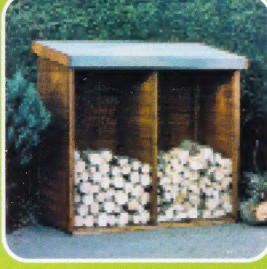

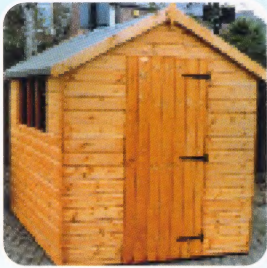

Floor Bearers

These are tanalised treated timber of 3 x 3, which would be laid under the building in the opposite direction to the floor joist. This enables a building to be lifted off the ground so it is away from any surface water and allows air underneath your building.

On any apex and pent shed the quantity of windows would vary depending on door position and door size. Both apex and pent models can be supplied with no windows.

IMPORTANT INFORMATION

BASE PREPARATION

When buying any garden building, it is necessary to construct a base for your building to be erected onto. This does not need to be elaborate as long as it is level and firm. This can be done by a concrete slatted base (see price sheet).

When your base is level a choice of tanalised bearers (see price on page 5) which would be laid under the building in the opposite direction to the floor joist, this enables a building to be lifted off the ground so it is away from any surface water and allows air to flow underneath your building.

However, if we arrive and the base is unsuitable there will be an additional charge and we will return at a later date and erect on the level base.

When choosing a site or the size of your building, you need to ensure there is no height restrictions that can hinder the arrival of your building e.g. alleyways or arch topped gates and that the fitters can gain access to the designated area and around the building for erecting.

AFTERCARE

All our buildings are pre-treated in a water based solution: to extend the life of your shed we recommend that you treat them again immediately after erection.

As wood is a natural product some expansion and shrinkage can occur. This is not something we can prevent. The roofing felt is made for use on sheds and summerhouses, on an occasion the felt can ripple, and is due to varying temperature changes and not an error with the material used.

To ensure all products are fulfilling customers needs, we are constantly reviewing our models and prices and reserve the right to change specifications without notice.

Don't forget:

- Level base required
- No height restrictions
- Access
- Are bearers required?

PLACING AN ORDER

On ordering your building a 15% deposit would need to be made, then the outstanding balance will be paid either prior to your building being delivered and erected or on the day direct to Shaws for Sheds Limited.

All deposits are non-refundable.

DELIVERY

When an order is placed you will be given an estimated timescale of when your delivery will take place. Shaws for Sheds will contact you beforehand to confirm a day and time. We can also remove customer's existing sheds, please enquire when placing your order.

PRODUCT DESCRIPTION

Standard:

Made from 12mm x 125mm tongued and grooved shiplap on sides and ends and matchboard on floor and roof, 50mm x 32mm framing with eased edges. These also include: Polyester green mineral felt, horticultural glass, tee hinges, lock and key and environmentally friendly base preservative.

Heavy Duty:

Made from 12mm x 125mm tongued and grooved shiplap on the side and ends and matchboard on the floor and roof, 50mm x 50mm frame with uprights, diagonal bracing, polyester green mineral felt, horticultural glass, tee hinges, lock and key and environmentally friendly base preservative.

Security:

Same as standard but with frame at 12" centres, diagonal bracing, security padbolt protector, bolted hinges and 2 x 2 fully framed door.

Log lap:

16mm x 100mm tongue and grooved barrel board.

On any apex and pent shed the quantity of windows would vary depending on door position and door size.

All models can be supplied with no windows, for no extra charge.
